**New CAD/CAM Innovation from DENTSPLY Prosthetics:
Compartis® ISUS™**

York, PA – DENTSPLY Prosthetics is proud to introduce the newest Compartis member – Compartis ISUS Bars and Bridges. These precision-milled Implant Supra Structures are available from Compartis USA SmartSourcing™. Now superstructures for implants can be CAD designed and CAM milled for the ultimate in precision fit. Both the bars and bridges are milled from one solid block of Titanium or Cobalt Chrome for a perfect, tension-free fit. Either material is perfectly biocompatible, so it is safe for patients.

ISUS bars and bridges can cover a range of two to eight implants; be screwed directly on the implant; and used on any implant system or multi-systems within a case. These features offer dentist and patient benefits of a passive fit the first time.

Compartis ISUS Bars and Bridges eliminate the need for waxing, casting, seating, and finishing. This translates into laboratory fabrication cost savings. With Compartis ISUS, the cylindrical design eliminates the need for abutments. Therefore, labs no longer need to inventory components.

With Compartis USA SmartSourcing, laboratories of any size can seamlessly integrate cutting edge CAD/CAM manufacturing solutions into their existing production systems with no capital expense – providing the smart solution for today’s competitive environment.

For more information regarding Compartis ISUS Bars and Bridges or Compartis USA SmartSourcing services, call 1.800.487.0100 or visit www.ceramco.dentsply.com.
